

Windows SmartScreen Installation Notice

What to do if Windows says "Windows protected your PC"

This message can appear while a newly released Windows app builds SmartScreen reputation.

Microsoft explains that even a signed new app can be shown as unrecognized until its file or publisher has accumulated enough positive reputation. This notice is not, by itself, proof that the app is unsafe.

Example of the Microsoft Defender SmartScreen message some users may see.

If you see this screen

- 1 Select More info.**
This reveals additional details and the option to continue.
- 2 Verify the app and publisher information.**
Proceed only if the installer came from an official SAPS/BOBCCPROS source.
- 3 Select Run anyway, if available.**
Continue only after you have verified the source and publisher information.

Keep Windows security turned on.

Do not turn off Microsoft Defender, disable SmartScreen, add security exclusions, disable antivirus protection, or lower Windows security settings to install SAPS.
